

PATPAQ™

The **PatPAQ clear draw string bags** have been designed to create a simple easy storage system for a patient's slide sheets. Many NHS trusts are changing over to patient specific slide sheets in a bid to fight infection control. Patient specific slide sheets such as Quintal's DisposaGlide range are excellent in this regard. The DisposaGlide sheets, being capable of being wiped down with Alcohol Wipes, Actichlor+ or Tuffy5, means that they last longer and longer, and they need to be stored close to the patient. The **PatPAQ** bags allow an individual patient's slide sheets to be stored simply at the end of the patient's bed.

Bag Size 38cm wide x 40cm Long

PatPAQ bags are supplied in a boxes of 240 units.

The draw string bag is sized to be able to store either two full length bed size flatsheets or tubular sheets.

Space is provided on the bag to write both the Ward and the patients name so that the chance of mixing slides sheets between patients is very much reduced

The PatPAQ bags are manufactured from PE and once the patient has no longer use for the slide sheets both the slide sheets and the bag can be quickly and easily disposed of through your normal clinical waste disposal methods.

PatPAQ's unique features ensure they are ideally suited for use in Social Services, Care Homes and right across the Hospital.

PatPAQ™

PRODUCT DESCRIPTION

The **Quintal PatPAQ** bags are manufactured from clear polyethylene sheet and have a draw string attached to the top of the bag so that it can be closed easily, securing the contents.

It is overprinted so that a Ward Name and an individuals name can be clearly written onto the bag with a permanent marker. This then clearly identifies the contents with that person.
