

ProGlide™

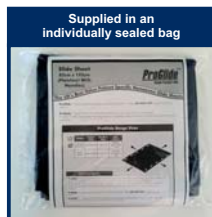

Single Patient Use

The UK's Best Value Single Use Nonwoven Slide Sheets

Following extensive Independent Testing Quintal is now pleased to announce the strongest, most competitive, non woven patient specific slide sheet available in the UK today.

The ProGlide™

The ProGlide™ is incredibly strong, **Soft & Quiet** to the touch, has high slip performance, & all at an extremely low cost. Available in two different sizes ProGlide™ provides a solution to all of your patient handling requirements.

ProGlide™ slide sheets are manufactured from a specially designed, non woven technical fabric. The sheets have 6 ergonomically positioned individual hand holds along each long side of the sheet. This **unique handle positioning** ensures that **the patients weight is almost equally distributed across all of the main handles**. This makes it much easier for carers to undertake a smooth stress free transfer. The polypropylene material provides high strength for extra durability, and its superb slip characteristics for makes it perfect for use in both lateral transfers or patient positioning.

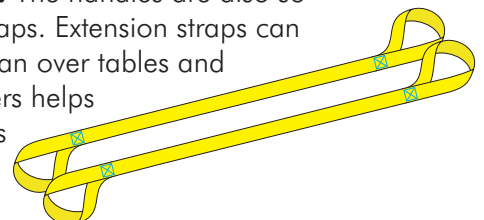

Navy Blue in colour, the ProGlide™ is lightweight and individually packed in it's own plastic bag to ensure it is kept clean and ready for use with a single patient. If it is still in its unopened bag, its ready for use with the next patient. No concerns about whether or not it has been used previously with another patient.

The ProGlide™ Single Patient Use Slide Sheets may be used, if needed, with the same patient several times and then disposed of appropriately after use.

Independent testing carried out by the University of Bradford has shown the ProGlide™ to be the strongest sheet of its type currently available in the UK today. Load tests showed the ProGlide™ to be capable of withstanding loads of over **500kg when both WET & DRY**. The handles are also so strong that the ProGlide™ can be used in conjunction with Extension Straps. Extension straps can make the ProGlide™ easier to use by removing the need for carers to lean over tables and trolleys in order to reach the handles. Better posture during patient transfers helps prevent many of the Musculoskeletal Disorder problems than care workers face today.

ProGlide's outstanding features ensure they are ideally suited for use in Hospital Theatres, Care Homes and by the Emergency Services.
